

VisualGate Systems Launches VueKIT a Surveillance Video over Powerline Solution for Homes and Small Businesses

An Affordable Digital Solution That Can be Installed in 5 Minutes

Toronto – October 11, 2007 – VisualGate Systems today announced the launch of VueKIT, a low cost Surveillance Video over Powerline (SVoP) solution that can be installed and recording in as little as 5 minutes. The simplicity and flexibility of this total package makes it ideal for both residential customers and small businesses where installation complexity, business disruption and cost are a significant factor.

VueKIT is a complete digital surveillance video solution that uses the existing AC wiring in a building to transmit a professional quality video stream to your computer for both local and remote viewing. Since electrical wiring is the most pervasive medium in any building, it means that there is no need to install new cabling typical of other video surveillance applications. Simply plug in the VueKIT components and install the software, and you can view live video within minutes.

The VueKIT package includes one Powerline IP camera, one Powerline adapter, and the VueKIT software which converts your PC into a video recorder. The software can run and manage up to 4 cameras simultaneously, so additional cameras can be purchased at any time if they are required, and alternate varifocal lenses are also available. The user-friendly VueKIT software allows for multiple users to access the video both locally or remotely from anywhere in the world via a standard Internet browser.

VueKIT offers multi-zone motion detection with email notification, and the ability to schedule recording times. These streaming video files can then be stored directly onto the hard-drive where it can be reviewed and searched by date and time. For security purposes, the VueKIT components are equipped with 56-bit DES encryption.

“VueKIT is an excellent solution for anyone who would like to monitor their home or business, but doesn’t want the complexity of installing a high end video surveillance platform with all the necessary cabling requirements and their related costs,” said David Kerzner, President and CEO of VisualGate Systems. “VueKIT is a simple, user-friendly package that offers the flexibility to move the cameras around to anywhere there is an electrical outlet, and the simplicity to be up and running within minutes, all at a fraction of the cost of other systems.”

About VisualGate Systems Inc.

VisualGate Systems Inc. is a market leader in the development and manufacturing of security grade Surveillance Video over Powerline (SVoP) products and solutions for commercial, government and residential applications. Both hardware and software solutions enable the reliable, commercial grade transmission of high quality audio and video signals over existing electrical wiring in any building, without having to run any video or LAN type cabling. Headquartered in Toronto, VisualGate Systems has international representation and serves a customer base around the globe.
