

VisualGate Systems and Tri-Ed Team Up to Distribute Surveillance Video over Powerline Solutions

Toronto – October 16, 2007 – VisualGate Systems is pleased to announce its partnership with Tri-Ed, North America's largest independent wholesale distributor of security and low voltage products for the delivery of their Surveillance Video over Powerline (SVoP) products and solutions.

VisualGate Systems' technology can set up instant networking within any building by enabling video, audio and control data to be transmitted over the building's existing AC wiring. VisualGate Systems offers two unique solutions for video surveillance requirements that incorporate Powerline technology and are based on HomePlug compliant standards. PL-VUE is a sophisticated system created for commercial and government use, while VueKIT has been created for small business and residential customers. Both VisualGate offerings have been developed to provide security dealers and installers with a secure, cost-effective video surveillance solution without the need to run new cabling.

PL-VUE is a robust system that captures high resolution images from up to 16 cameras, and offers multiple motion detection areas, sophisticated search and record capabilities, and a wide range of alarm settings. VueKIT is a low cost surveillance solution which also offers motion detection and recording options, but can only support up to 4 cameras.

Steve Roth, President and CEO of Tri-Ed points out, "The distribution agreement between Tri-Ed and VisualGate Systems is a perfect fit. Tri-Ed's well established distribution channels ensure that their products will reach our broad dealer base."

"VisualGate Systems is pleased to be able to introduce our new technology to security professionals across the U.S. and Canada through Tri-Ed's distribution channels," notes David Kerzner, President and CEO of VisualGate Systems. "VisualGate's surveillance video applications will offer dealers and installers a unique solution that will help to reduce installation costs and minimize installation time, in addition to providing a cable free solution where historically installing cable may not have been an option."

About VisualGate Systems Inc.

VisualGate Systems Inc. is a market leader in the development and manufacturing of security grade Surveillance Video over Powerline (SVoP) products and solutions for commercial, government and residential applications. Both hardware and software solutions enable the reliable, commercial grade transmission of high quality audio and video signals over existing electrical wiring in any building, without having to run any video or LAN type cabling. Headquartered in Toronto, VisualGate Systems has international representation and serves a customer base around the globe. For more information about VisualGate Systems and its products, please visit the website at www.visualgatesystems.com.

About Tri-Ed Distribution, Inc.

Tri-Ed, North America's largest independent wholesale distributor of security and low voltage products, offers a huge inventory of security products spanning access control, CCTV, fire, burg, commercial/residential, and sound and communications.
